VitaCure: A Comprehensive Solution for Affordable, Accessible, and Inclusive Healthcare

Ashish Patil, Pratik Bharuka, Prof. Dr. Meesala Sudhir Kumar Sandip University, Nashik, India

Abstract: Access to healthcare remains a significant challenge for underserved populations. High costs, language barriers, and limited resources restrict timely access to quality care. VitaCure, an AI-driven healthcare platform, addresses these barriers by offering accessible, affordable, and language-inclusive services designed for diverse populations. Its key features—intuitive symptom analysis, personalized medication suggestions, and remote consultations—make healthcare more approachable and proactive. This paper examines the healthcare challenges faced by underserved communities, explores advancements in healthcare technology, and positions VitaCure as a comprehensive solution to improve healthcare access and quality, empowering users to take charge of their well-being.
