Abstract: Water is one of most important constituents of life support system. It is indeed a wonderful chemical medium which has unique properties of dissolving and carrying in suspension a huge variety of chemicals. Natural surface water bodies often have impurities from various sources. The impurities may be suspended particles, colloidal materials and may also be dissolved cationic and anionic substances. Various kind of natural and man-made activities, like industrial, domestic, agricultural and others, day by day creating water pollution challenges with new protections to give all our children the gift of clean and safe water in the 21st century
