Abstract*: This paper presents the design and implementation of StuAlly, a web application tailored to address the accommodation, food, and academic support needs of students in Pune. The platform focuses on four major student-centric localities: Akurdi, Nigdi, Hinjewadi, and Deccan. StuAlly integrates features like location-specific listings, reviews, ratings, interactive maps, and booking options to create a streamlined experience for students. This paper details the application's architecture, benefits, and potential for scalability. Early user feedback highlights the platform's value in simplifying the search process and fostering community engagement among students.*
