Abstract*: The College Campus Placement System is an Android application designed to streamline and automate the placement process within educational institutions. The system aims to replace traditional manual methods, which are time-consuming, prone to errors, and require significant manpower. The application facilitates efficient communication between students, placement officers, and company representatives, enabling students to upload their CVs, placement officers to filter candidates based on specific criteria, and company representatives to access relevant information. The system is designed to improve the overall efficiency, accuracy, and transparency of the placement process. This paper discusses the architecture, methodology, and advantages of the proposed system, along with its potential impact on the placement process in educational institutions.*
