Abstract: *With the prevailing digital era, students are distracted by social media, resulting in poor academic concentration. Our app solves this problem by turning learning into a recreational activity that is fun and accessible. Harnessing the strength of cutting-edge AI technology, the platform boasts an AI-driven chatbot that offers instant doubt-resolution, providing learners with a speedy and accurate academic answer. Besides, a social area allows users to collaborate, exchange information, and communicate through posts, images, and videos, creating an active and engaging learning community. Unlike conventional social media, our app balances learning with socialization, keeping learners motivated and inspired towards their academic pursuits. By combining AI powered support with a collaborative community, we seek to establish an effective digital platform that promotes learning, inspires peer-to-peer collaboration, and creates a strong learning community.*

Keywords: AI-based learning, interactive education, chatbot, user-generated content, education focused networking.
