Abstract: *The Project "Result Analysis Management System" is to record the details of Marks of the Students. The Result Analysis Management System is a software application developed to simplify and automate the process of managing and analyzing student results in educational institutions. The system provides a user-friendly interface that enables users to log in securely, upload result data through Excel sheets, and generate customized reports based on various criteria such as branch, academic year, semester, and performance categories (e.g., toppers, above 75%, above 60%, failed, ATKT).. The system provides a user-friendly interface that enables users to log in securely, upload result data through Excel sheets, and generate customized reports based on various criteria such as branch, academic year, semester, and performance categories (e.g., toppers, above 75%, above 60%, failed, ATKT).*

Keywords: The Result Analysis Management System has only one user login because it can be accessed by authorized person and it is confidential data. It includes student result processing, excel data upload, pdf generation , semester wise result management ,user authentication ,topper identification etc.,
