Abstract: *This paper introduces a smart gadget designed to address the growing concern of theft of personal belongings. The gadget incorporates advanced technologies including motion sensors and GPS tracking to detect unauthorized movement and pinpoint the location of the item in real-time. A key feature of the gadget is its ability to send instant alerts to the user via a mobile application, ensuring prompt action in case of theft or tampering. The system is designed to be user-friendly, allowing individuals to easily set up and monitor their belongings through an intuitive interface on their smart phones*

Keywords: detect unauthorized movement
