Abstract: *The connection between students and alumni plays a vital role in both academic and career growth. This paper introduces the Student-Alumni portal, a digital platform aimed at strengthening alumni-student engagement, optimizing data handling, and expanding career development opportunities. The system incorporates functionalities such as alumni networking, event coordination, advertisements, resume-building resources, student information management, and automated email alerts. Developed using PHP, MySQL, HTML, CSS, and a MySQL database, the platform provides an intuitive and secure interface. The proposed solution tackles common issues in alumni involvement, offering an effective and scalable model for educational institutions.*
