Abstract: *Hair coloring, or hair dyeing, is the exercise of converting the hair colour. The primary reasons for this are cosmetic: to cover grey or white hair, to trade to a color regarded as extra elegant or ideal, or to repair the original hair colour after it's been discolored with the aid of hairdressing procedures or solar bleaching. Hair color works like a further coat to your tresses. This gives a look of thicker, voluminous hair.*

Keywords: Hair coloring
