Abstract: *There is a huge interest in herbal product due to their remedies compared to synthetic one. Traditional soaps can lead to dehydration of the facial skin, affecting its texture. Face wash is a gentle cleanser that doesn't strip the skin's natural oils. Face wash is a multi-action agent with cleansing, anti-acne, anti-wrinkle, moisturizing, and fairness-improving properties. This work's main goal is to develop compare the natural ingredients in the herbal facewash tablet. This revolutionary skincare the advantages of conventional liquid or gel-based cleansers in a practical, in a convenient, portable, and eco-friendly tablet format. At the moment, the face washes available on the market are creams and gels that need to be stored in large plastic containers or foldable tubes due to their portability issues and because of their aqueous nature its required preservative. The current project mainly focuses on the creation of herbal facewash tablets that overcome the synthetic face washes. In addition to being easily portable, facewash tablets are designed to reduce prices, container size, and the usage of dangerous preservatives. To evaluate factors such as pH, irritability, hardness, friability, thickness, and foaming capacity, and accelerated stability, facewash tablets were prepared with varying constituent concentrations.*
