Abstract: *The medicinal plants are considered to be effective and for most important for the human health. Some of the natural medicinal plants are so common that we use them in daily life without knowing their medicinal importance. Custard apple (Annona squamosa) is a great natural source of Copper and gives hair the dark melanin colour and that it lacks. Therefore if you are dealing with too many greys, consume custard apple to stop your hair from losing colour further. Hair color change by dye application is a common procedure among women. Hair dye cosmetic products are used for colouring hair. Hair dye is classified according to color resistance, into classified, according to color, resistant, into temporary, semipermanent, and permanent. In oxidation system, there is an intense diffusion of the molecule into the cortex, which promotes a longer color resistance. Dye and color precursors present differences related to chromophore groups.*
