Abstract: *At the global level there is the requirement of inventive strategies to expand healthcare delivery in comprehensive way. Recently, National commission for Homeopathy has introduced Competency Based Dynamic Curriculum (CBDC) which emphasizes the integration of homeopathy into national health programs. This paper analyzes the strategic value of integrating homeopathy into national health programmes, a policy that can be milestone change in public health. These include enhancing healthcare accessibility in underserved regions, improving cost-effectiveness for both State and patient, and strengthening approaches to chronic disease management with the Integration of homeopathy. Main objective of this paper is to analyze and explore usefulness of such national policies in order to achieve comprehensive public health goals. Thus, main objective of this paper is to elaborate the advantages integration of homeopathy into National Health Programme.*
