Abstract: *The National Education Policy (NEP) 2020 represents a transformative approach to the Indian education system, aiming to enhance inclusivity, equity, quality, and innovation. This research paper critically examines the key reforms introduced by NEP 2020, their potential implications, and the challenges in implementation. The policy marks a shift from rote learning to competency-based education, integrating technology and interdisciplinary studies to prepare students for a dynamic global environment. The study incorporates in-text citations from relevant academic sources and government reports to provide a comprehensive analysis. A literature review has been conducted to understand the conceptual evolution of education policies in India, the role of technology, and the international perspectives on educational reform.*
