Abstract: *The National Education Policy (NEP) 2020 introduced transformative reforms in India's higher education sector, focusing on multidisciplinary learning, institutional autonomy, technology integration, and research promotion. This study, based on secondary data, analyzes the key reforms, challenges in implementation, and opportunities for the future. The research utilizes government reports, academic papers, and policy documents to evaluate the impact of NEP 2020 on universities, faculty, students, and the education system. Key challenges such as funding constraints, faculty training, digital divide, and policy execution gaps are explored, alongside opportunities for globalization, digital learning, and innovation-driven education. The study concludes with policy recommendations to ensure effective implementation.*
