Abstract: Visual Cryptography (VC) is a technique, which is used to conceal the secret image which will vary with the user and these images are distributed to the intended recipients. In this paper we will learn the different uses of visual cryptography. It is used in data hiding, securing images, color imaging and other such fields. In general, for some critical security issue the visual cryptography scheme is used, for example to identify the difference in human and machine.

Keywords: Visual Cryptography (VC), Security Color, Image Encryption
