Shri Shivayogeeswar Rural Ayurvedic Medical College and Hospital, Inchal, Belgavi, Karnataka

Abstract: *Shalyatantra is one of the most important branches in the Ayurvedic field which deals with the different types of modalities and treatments. The principles and miraculous therapies of this system will certainly improve not only quantity of life but quality of life too. Vrana is the most important disease in the field of Shalyatantra. All the types of Shalya and Shastrakarma ultimately result into Vrana formation. Elaborated description of Vrana (wound or ulcer) is available in the Brihatrayees; Charak Samhita, Sushrut Samhita and Ashtang Sangraha. Wound is a break in the integrity of the skin or tissue often which may be associated with disruption of the structure and function. Acharya Sushruta has described the Shashti Upakrama and Sapta Upakrama for the wound management from its manifestation to the complete healing & given much importance Shodhana and Ropana in the management of Dushta Vrana as well as all types of treatment as local, general, & surgical measures*

Keywords: Infected wound, *Dushta Vrana*, *Ayurveda*
