

Structural Performance of High Rise Building with Outrigger System: A Review

Mr. Shahezad Javed Patel and Prof. B. V. Chavan

Department of Civil Engineering

Pankaj Laddhad Institute of Technology & Management Studies, Buldana, Maharashtra, India

Abstract: *In India, the tall building has always been a vision of dreams and technical progress, leading to the progress of the world. Currently, with rapidly growing urbanization, the tall building has become a more convenient option for office and residential housing. Tall buildings are usually designed for residential, office or commercial use. They are primarily a reaction to the rapid growth of the urban population and the demand for business as close to each other as possible. Much of India is prone to damage to seismic hazards. Therefore, it is necessary to take into account the seismic load to design the design of the height design. The present work deals with the literature review related to high rise building with outrigger system.*

Keywords: RC frame, Outrigger, STAAD
