Abstract: *The present educated age utilizes web for everything right from requesting food to getting recruited. In reality, lackey competitors depend much more on web than some other source like paper or systems administration. In this paper, we attempt to address the gap between recruiter and service provider. This is done by taking into consideration the details provided by both, the service provider and the recruiter. There are lots of platforms for educated candidates but there is no any platform for skilled workers for day today needs. In this way we came to the conclusion that there is drastic need to build a platform which can create direct connection between recruiter and workers so we create a platform named as "Connect-India". The sole purpose of this application is to improve the employment ratio. The features of this application is it provide user friendly interface, chat facility, GPS location tracker and rating facility.*

Keywords: Service provider, Recruiter, GPS, Android Application
