Abstract: *This online vehicle rental system is primarily intended to allow clients to reserve cars from any area in the world.The aim of this project is to create a platform between customers and car rental companies. Users give data to this application by providing specifics. Customers who have enrolled on the car rental website can reserve a car that meets their requirements. This initiative was created to allow customers to book their preferred cars online. The growth of the Internet and technological advancements have tremendously enhanced different company processes and interactions between firms and their clients, and the cars rental sector is no exception. The suggested system is entirely compatible with these online modes of operation.The web-page was designed using html, css, javascript. It has automated the process effectively and efficiently, minimizing the need for manual intervention.This automated approach makes it easy for clients to provide relevant information.For getting user database xampp and php is used for database connection.*

Keywords: HTML, CSS, JAVASCRIPT, DBMS, PHP, PHPMYADMIN, XAMPP, Database connection.
