Abstract: *The Indian market is heavily reliant on the derivatives market. It is a set of financial guidelines that are connected to a particular financial instrument, indicator, or commodity and through which certain risks may be managed on the financial markets on their own. In India, the derivative market has grown to a multi-trillion-dollar level and is still growing at an exponential rate. Commodities, precious metals, foreign exchange rates, bonds, shares and share warrants, short-term securities, and money market products are among the common derivative instruments. The National Stock Exchange (NSE) and Bombay Stock Exchange (BSE), along with smaller Indian exchanges, are the two main marketplaces in India where derivatives are traded. We may now talk about how derivatives products have performed in the Indian market. The author will discuss the worth of the derivatives market, its obstacles, and the significance of its prospects in the current set of investigations.*

Keywords: Exponential Rate, NSE, BSE, Derivatives
