Abstract: *This research paper is a systematic review of sustainable development initiatives in India. In this systematic review, twenty articles related with sustainable development in India (2014-2019) had been reviewed from the source of multiple sources. This study found that there are only few literature regarding sustainable development initiatives in India and many of the SDG's were unexplored by the researchers. This research is concluded by identifying the SDGs of gender equality, reduction in inequality, peace and justice, and responsible consumption and production as the most promising niches for future research in the area of sustainable development initiatives in India.*

Keywords: Sustainable Development, SDG, Sustainable Development Goals, Sustainability
