III. LITERATURE REVIEW

Dividend Yield and Attractiveness:

Studies by Gordon (1962) and Miller and Modigliani (1961) established the importance of dividend yield as a determinant of stock valuation. Investors often prefer stocks with higher dividend yields, as they provide an immediate income stream relative to the investment's cost. Research by Black and Scholes (1974) highlights that dividend yield can affect the risk-return trade-off for investors.

Dividend Growth and Consistency:

Gordon (1959) proposed the Gordon Growth Model, emphasizing the significance of dividend growth in determining stock prices. Studies by Marsh (1982) and Chatterjee and Mukherjee (2013) reveal that companies with a history of consistent dividend growth often outperform the market and offer attractive investment opportunities.

Total Return and Long-Term Perspective:

Research by Siegel (1992) and Malkiel (2015) underscores the compounding effect of dividend reinvestment, emphasizing the advantages of a long-term investment horizon for income-oriented investors.

Price Volatility and Risk Management:

Research by Fama and French (1992) suggests that high price volatility can be detrimental to portfolio returns. Studies by Campbell and Shiller (1988) emphasize the importance of risk management strategies, including diversification, to mitigate the impact of price volatility.

Financial Metrics and Dividend Sustainability:

Gordon (1959) introduced the Dividend Discount Model (DDM), which links dividends, EPS, and payout ratios to stock valuation. Studies by Baker and Powell (2005) and Frankfurter et al. (2002) highlight the significance of analyzing financial metrics when evaluating dividend sustainability.

Investment Strategies and Company Outlook:

Research by Bodie et al. (2014) emphasizes the importance of a diversified portfolio to manage risk. Evaluating a company's industry outlook, competitive position, and growth prospects is critical for making informed investment decisions, as highlighted by Miller (1986) and Campbell et al. (1997).

IV. DIVIDEND YIELD ANALYSIS

Dividend yield is a key measurement utilized by pay situated financial backers to evaluate the engaging quality of a stock as a pay speculation. It gives a sign of how much pay a financial backer can hope to get comparative with the ongoing business sector cost of the stock. The equation to work out profit yield is as per the following:

Dividend Yield= (Annual Dividend Per Share / Current Stock Price)×100
Dividend Yield=(Current Stock Price/Annual Dividend Per Share)×100

For example, if Wipro pays an annual dividend of \$2 per share and its current stock price is \$50, the dividend yield would be:

Dividend Yield= (\$2/\$50)×100=4%
Dividend Yield= (\$50/\$2)×100=4%

In this case, the dividend yield is 4%, indicating that an investor can expect to receive a 4% annual return in the form of dividends based on the current stock price.

4.1 Several factors can influence fluctuations in Wipro's dividend yield:

These measurements are fundamental in assessing the organization's ability to support and possibly develop profit installments, the ramifications of profit soundness, and its monetary wellbeing in the midst of financial difficulties.

7.1 Earnings Per Share (EPS)

Assessment of EPS Patterns:

Income Per Offer (EPS) is a basic monetary metric that demonstrates an organization's productivity and its ability to create profit for investors. Dissecting Wipro's EPS patterns in 2022 permits us to survey its capacity to support and possibly develop profit installments.

A steady or developing EPS proposes that the organization is creating adequate benefits to help profit conveyances. Any decrease in EPS might raise worries about the maintainability of profit installments.

“Connection among's EPS and Profit Steadiness:

EPS and profit soundness are firmly corresponded. An organization with a background marked by keeping up with or expanding EPS is in many cases better situated to support and possibly raise profit installments. Financial backers depend on a steady or developing EPS as a mark of the organization's capacity to create the essential income to support profits.

		Financials Ratios					
		TTM	Mar-23	Mar-22	Mar-21	Mar-20	Mar-19
Adjusted EPS (₹)		22.32	20.68	22.31	19.71	17.02	14.92
Cash EPS (₹)		22.32	26.80	27.95	24.88	20.75	18.17

7.2 Payout Ratio

Analysis of Dividend Payout Ratio:

The profit payout proportion estimates the extent of income that an organization circulates to investors as profits. It is determined as:

$$\text{Payout Ratio} = (\text{Dividends Paid} / \text{Earnings}) \times 100 \quad \text{Payout Ratio} = (\text{Earnings} / \text{Dividends Paid}) \times 100$$

A high payout proportion proposes that a huge piece of income is being gotten back to investors, leaving less for reinvestment or monetary soundness. Then again, a low payout proportion demonstrates that the organization holds a bigger part of its profit for different purposes, like development or obligation decrease.
